Professor Gannon's research involves wetlands ecology and the ecologically relevant physiology of invertebrates, especially the physiology of a large semi-terrestrial crab, *Cardisoma guanhumi* and the evolution of terrestriality in crabs. He is presently studying with Dr. Ray Henry at Auburn the control of ventilation in this crab as well as its osmotic (salinity) preferences and burrowing behavior.

Her work has direct implications for the heritability (genetic effects) of behavior in amphibians and other animals. She also serves as the associate editor of the *Journal of Behavioral Ecology and Sociobiology*.
